

The Gentle Touch

The latest electric fires from Burley feature **Sensa-Switch**. This technology allows the user to operate the fire simply by touch. A soft caress of the fire or the wall pad will control the functions of the fire. A simple-to-operate remote control is also included.

For the warmer summer months, a cool air function allows the fire to double up as a cool air fan. The fire can even improve air quality and reduce odours by means of an ionizer.

Burley MD Steve Barson advised that these state of the art fires are proving popular not only with trend-setters but also older, less active consumers who can operate the fire from the comfort of a chair.
